DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 32-53, 58-61, drawn to a charge sampling circuit, classified in class 327, subclass 91.
- II. Claims 54-55, drawn to a two-step band-pass charge sampling circuit, classified in class 327, subclass 557.
- III. Claims 56-57, drawn to a front-end sampling radio receiver, classified in class 327, subclass 551.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group II has separate utility such as chopping circuit. See MPEP § 806.05(d).

Inventions Groups I & II and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because another type

Art Unit: 2816

of the charge sampling circuit maybe employed than the one recited in claims of Groups I and II. The subcombination has separate utility such as sampling/holding circuit.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
